

# Worksheet: sist

Course: SIS102

Student Name: \_\_\_\_\_

## Part I: Multiple Choice Questions

**1. What is the main topic of Lecture 2 in the SIS102 course?**

- A. Insider Threat and Ransomware
- B. Network Security
- C. Cryptography
- D. Access Management

**2. Where do the most elusive threats to an organization come from?**

- A. Outside the organization
- B. Within the organization
- C. From partners
- D. From customers

**3. What is one of the causes of insider threats?**

- A. Malicious intent
- B. Lack of training
- C. Poor network security
- D. All of the above

**4. What type of insider intentionally harms the company?**

- A. Negligent insider
- B. Accidental insider
- C. Malicious insider
- D. Unintentional insider

**5. How can insider threats be prevented?**

- A. Technical controls only
- B. Organizational measures only
- C. Both technical controls and organizational measures
- D. Neither technical controls nor organizational measures

**6. What is ransomware?**

- A. Malicious software that steals data
- B. Malicious software that encrypts files
- C. Malicious software that crashes systems
- D. Malicious software that spreads viruses

**7. What do ransomware attackers often threaten to do if the ransom is not paid?**

- A. Release sensitive stolen data
- B. Report the organization to regulators
- C. Both A and B
- D. Neither A nor B

**8. How does ransomware typically infiltrate systems?**

- A. Through phishing emails
- B. By exploiting vulnerabilities
- C. Through malicious downloads
- D. All of the above

**9. What is one way to protect against ransomware?**

- A. Regular software updates
- B. Robust endpoint security solutions
- C. Educating employees about phishing
- D. All of the above

**10. What is an example of a specific ransomware countermeasure?**

- A. Immutable storage architectures
- B. Application whitelisting
- C. Network segmentation
- D. All of the above

**11. What strategy combines general malware defenses with ransomware-specific tactics?**

- A. Defense in Depth
- B. Defense in Width
- C. Ransomware-only defense
- D. Malware-only defense

**12. What is the purpose of threat intelligence services?**

- A. To prevent attacks
- B. To detect attacks
- C. To respond to attacks
- D. To provide information about potential threats

**13. What is the benefit of using end-to-end encryption?**

- A. To prevent attacks
- B. To detect attacks
- C. To protect data in transit
- D. To protect data at rest

**14. What is incident response?**

- A. A plan to prevent attacks
- B. A plan to respond to attacks
- C. A plan to detect attacks
- D. A plan to recover from attacks

**15. What is threat hunting?**

- A. The process of detecting and responding to threats
- B. The process of preventing threats
- C. The process of recovering from threats
- D. The process of identifying and mitigating threats

**16. What is the purpose of network segmentation?**

- A. To prevent lateral movement
- B. To detect attacks
- C. To respond to attacks
- D. To protect data at rest

**17. What is the purpose of application whitelisting?**

- A. To allow all applications to run
- B. To block all applications from running
- C. To allow only approved applications to run
- D. To block only approved applications from running

**18. What is the purpose of restricting administrative privileges?**

- A. To allow all users to have administrative privileges
- B. To block all users from having administrative privileges
- C. To limit the number of users with administrative privileges
- D. To give all users full control over the system

**19. What is the purpose of immutable storage architectures?**

- A. To allow data to be modified
- B. To prevent data from being modified
- C. To detect data modifications
- D. To respond to data modifications

## Part II: True / False

Write True or False for each statement.

1. \_\_\_\_\_ The most elusive threats to an organization come from outside the organization.
2. \_\_\_\_\_ Insider threats can be caused by malicious intent.
3. \_\_\_\_\_ Ransomware is a type of malicious software that steals data.
4. \_\_\_\_\_ Ransomware attackers often threaten to release sensitive stolen data if the ransom is not paid.
5. \_\_\_\_\_ Regular software updates can help protect against ransomware.
6. \_\_\_\_\_ Educating employees about phishing can help prevent insider threats.
7. \_\_\_\_\_ Immutable storage architectures can help protect against ransomware.
8. \_\_\_\_\_ Application whitelisting can help prevent ransomware attacks.
9. \_\_\_\_\_ Network segmentation can help prevent the spread of ransomware.
10. \_\_\_\_\_ The Defense in Depth strategy combines general malware defenses with ransomware-specific tactics.

## Part III: Written Questions

1. What are the causes of insider threats?

---

---

---

---

2. How can insider threats be prevented?

---

---

---

---

3. What is ransomware and how does it work?

---

---

---

---

4. What are some ways to protect against ransomware?

---

---

---

---

5. What is the Defense in Depth strategy and how does it relate to ransomware protection?

---

---

---

---

6. What is the purpose of threat intelligence services in relation to ransomware protection?

---

---

---

---

**7. How can end-to-end encryption help protect against ransomware?**

---

---

---

---

**8. What is incident response and how does it relate to ransomware protection?**

---

---

---

---

**9. What is threat hunting and how does it relate to ransomware protection?**

---

---

---

---

**10. How can network segmentation help protect against ransomware?**

---

---

---

---
